Newave will be showcasing innovative solutions at CeBIT 2011!

Dear Mr.

XXXXXXXXXX

For many years, the CeBIT trade show in Hanover, Germany, has been a key stage for the international world of information and telecommunications technology and has developed into one of the most influential and high-profile events in the global ICT sector today.

And just like other years, Newave will be present at this global melting pot for innovations. This year we will be showcasing power supply innovations offering more power and a new degree of flexibility.

Newave will be located in **Hall 12 (Stand B70)** and will present exhibitions encompassing two important thematic areas:

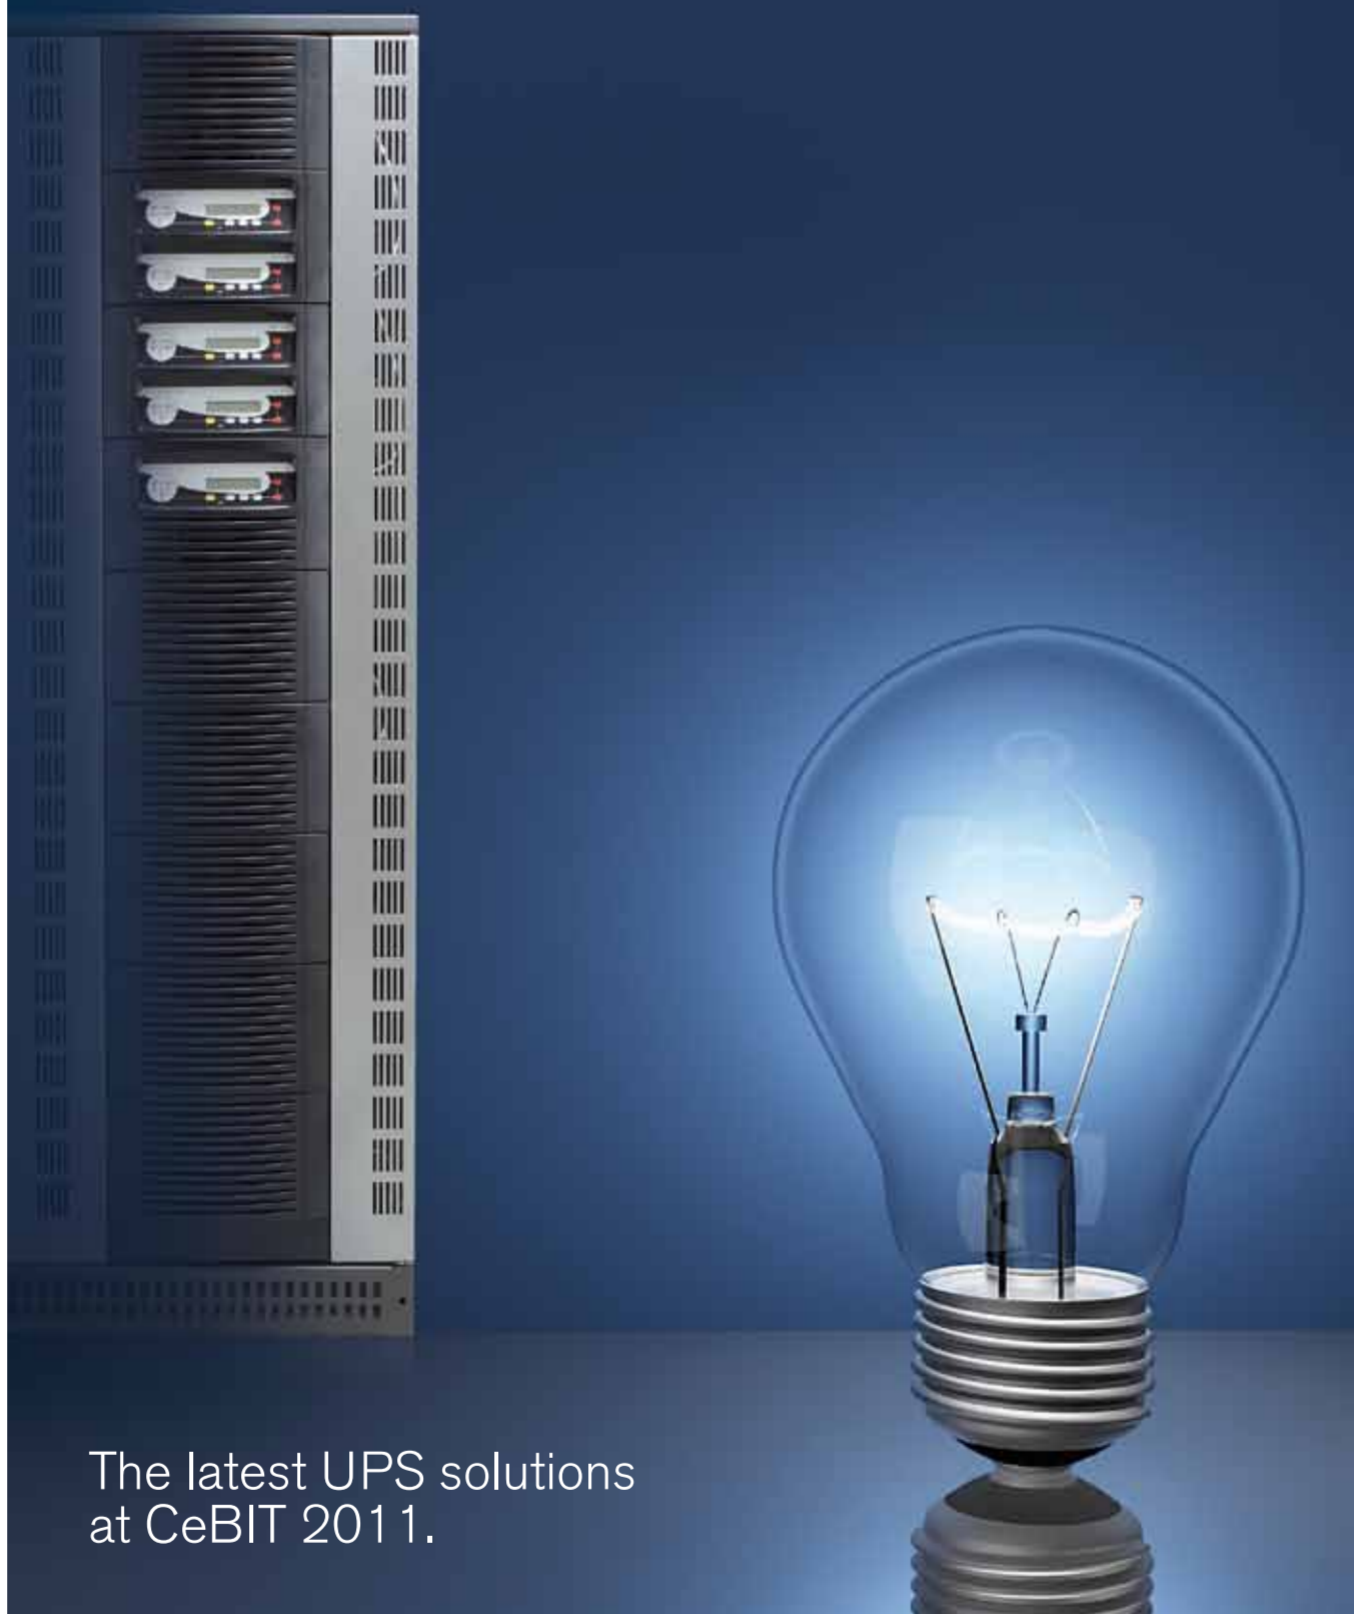

large power protection systems and industrial applications.

We are pleased to include as enclosure your personal entry ticket for the CeBIT show. After completing the online registration at www.cebit.com, your access to the Exhibition Ground will be guaranteed.

We are looking forward to welcoming you at our booth!

Yours sincerely
Your Newave Team

Are you safe when the power goes off?

The latest UPS solutions at CeBIT 2011.

The main information at a glance

Show date	1 – 5 March 2011
Show venue	Exhibition Grounds, 30521 Hanover, Germany
Opening hours	Daily, 9 a.m. to 6 p.m.
Newave location	Hall 12 / Stand B70

Participate in our contest!

Meet us at CeBIT 2011, guess the weight of our new 500 kVA UPS innovation and win a trendy coffee machine or an Swiss watch.

Highlights at CeBIT 2011

PowerWave 33 (500 kVA):

As one of the highlights, Newave is introducing a new range of the PowerWave 33 (500 kVA). The product, taking a leading position in terms of both technology and performance in the global market, will be unveiled at CeBIT 2011.

The PowerWave 33 series is based on the transformerless technology introduced by Newave 15 years ago. The transformerless design leads to a smaller product footprint and lower weight. Due to this technology, the PowerWave 33 series offers unmatched power performance with class-leading efficiency across a wide load range (up to 500 kVA) and takes a unique position in terms of weight and size in the market.

Conceptpower DPA (installation at 1500 kVA):

Another highlight is a large-scale Conceptpower DPA installation delivering power capacity of 1500 kVA (based on 50 kVA modules and 250 kVA per system). This large facility UPS protects large-scale, mission-critical applications from the full range of power quality problems and outages. The Conceptpower DPA will be presented for the first time in Hanover at 1500 kVA.

Industrial applications

Another attraction of Newave's exhibition will be the presentation of various DPA UPScale RI models. The rack-independent and modular DPA UPScale RI simplifies the engineering and deployment of customised power protection solutions. These UPS systems allow system integrators to add their own know-how and to implement individual solutions according to their design requirements.

Where innovation meets energy!

Refresh yourself with a Newave Energy Drink! We are looking forward to seeing you at our booth (Stand B70) in Hall 12.
